ART & TECHNOLOGY

Dear Friends,

I am happy and very proud to introduce you today my set of instruments specially developed with Smile Line in Switzerland !

RSPCT brushes have completely changed my way of building up and staining ceramics. Their tip is as thin as a hair and allows you to master very small portions of ceramic safely and precisely while maintaining its moisture and plasticity. It is strong enough to handle larger portions without losing control in the application.

RSPCT brushes are definitely the most amazing brushes I've ever been using! They are guaranteed very long lasting and of the highest quality. All the other instruments in the set provide the best working comfort for the technique that I am teaching all around the world.

I really hope that you'll enjoy discovering and using them as much as I do !

Cheers,

Maziano Manzini
